The HEALTHFLO[®] Advantage

The HEALTHFLO[®] is a safer and more hygienic hand washing system for healthcare facilities by using Bacterial Growth Limiting Components (BGLC). The patented motor drive mechanism eliminates magnetic solenoids and porous rubber or vinyl diaphragms which can harbor biofilm growth. The water velocity through the HEALTHFLO[®] sensor faucet system is increased to flush it clean after every use, and the triggering assembly cleans itself of debris that would ordinarily cause other mechanisms to weep. The system also eliminates rubber-orifice flow controls that can also harbor bacteria, and it is designed to flow at its specified flow rate regardless of variations in water pressure, without flow controls or outlet devices of any kind. The HEALTHFLO[®] sensor faucet system is available in 1.5gpm and 2.2gpm flow rates.

The unique design of the HEALTHFLO[®] sensor faucet system allows for the use of various power options including battery power, electrical power (with battery back-up), or an environmentally friendly hydro-generator.
