FOR IMMEDIATE RELEASE

AMTC introduces the Side Mount Flush Genie® for urinals and water closets

CHATSWORTH, CA (May 2015) - The FLUSH GENIE® is a fully programmable automatic flush device for urinals and toilets. The smart design allows the device to be switched between sensor activated mode and timer controlled mode. When in SENSOR activated mode, the unit sends out an infrared beam that senses a user on a urinal or toilet. Once the user walks away from the fixture the unit triggers the fixture to flush automatically. The unit includes an electronic push button to allow for a courtesy flush option. When in TIMER controlled mode, the unit converts most urinals into water efficient fixtures by controlling the amount of daily flushes. The flush intervals can be programmed to flush once every 2, 4, 6, or 8 hours. The unit will go to SLEEP if a user is NOT detected within 135 minutes since the last use to prevent flush activation while the facility is closed. A mechanical manual flush override using the provided MANUAL FLUSH KEY will allow the custodial staff (not the user) to flush the unit manually at any time. (Note: electronic push button is deactivated in TIMER mode).

About AMTC

AMTC is a leading manufacturer of advanced plumbing systems and water conservation devices for commercial applications. The company specializes in “touch-free” electronic flush valves, urinal and commercial toilet systems, electronic faucet systems, and electronic soap dispenser systems. All of AMTC’s electronic plumbing systems utilize its proprietary Micro-Cam Technology as a more reliable alternative to solenoid technology usually found in most competitor systems.
